

Powerful, Flexible and Easy to Operate

Improve collaboration, communication and decision making in Control Rooms, Operation Rooms and Command Centers

Userful is easy-to-use to use software that turns a standard server into a video wall controller that connects to displays over the network.

Scalable

Expand your deployment as needed: easily add new inputs and operators or new screens and video walls.

Turnkey

Userful's video wall controller comes ready to go with software pre-installed on a certified server.

Budget Friendly

All the high-end features required for control and command center applications with an affordable price point.

Failsafe

In the rare event of a server failure, option for dual controllers eliminates downtime.

Secure

Security is paramount in the architectural approach: server resides in a secure location, option to operate with no internet connection and locked down software ensure security and peace of mind.

Futureproof

Userful's cost-effective software support has you covered with comprehensive customer care, regular feature releases and updates.

Key Features

Unlimited Sources

Operators can use any source from the network, hard drive, HDMI or SDI capture, desktop apps or they can display as many full screen browsers as needed all running from the Useful server.

Custom Configuration

Display multiple simultaneous content sources with maximum flexibility using zones, multi-window and picture-in-picture.

Custom Presets

Administrators can preset multiple layouts (using zones, multi-window and picture in picture) and operators can invoke those presets using any device (smartphone, desktop, tablet).

Interactivity

Any operator can use a browser (including a smartphone) as the mouse and keyboard controller for the video wall—or for any zone within the video wall.

Cloud Managed

Control the entire solution via the cloud. For control rooms with no internet connection, all the management and control features can use the Local Area Network.

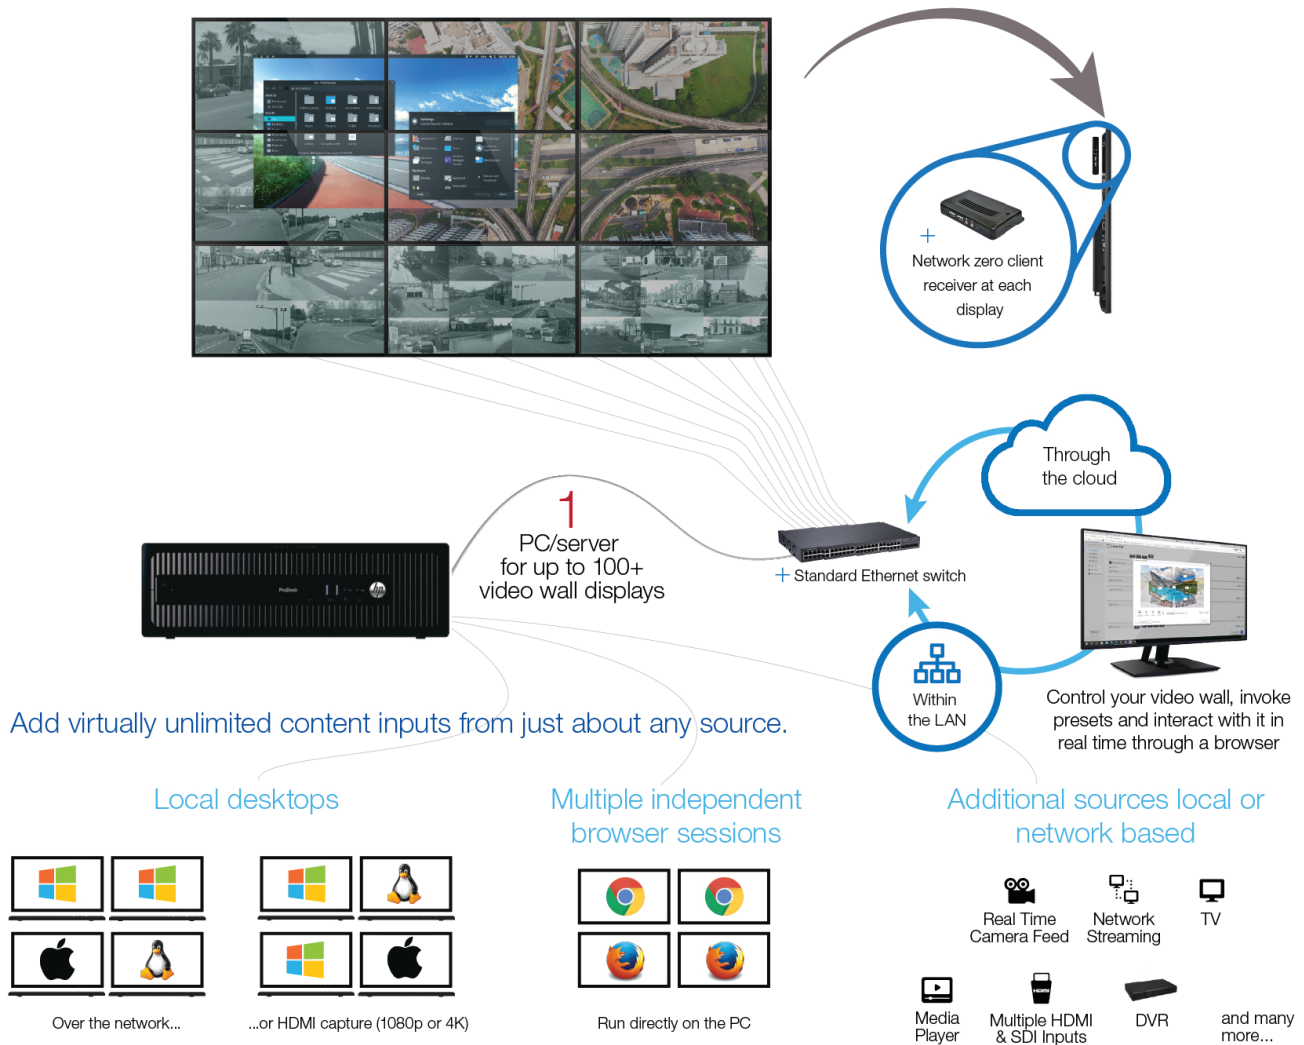

Desktop Streaming

Operators can easily display their desktops on the video wall using the local area network. For higher resolution use an HDMI connection (up to 4k).

How the Useful Video Wall Solution Works

Why Useful

Userful is a leading software infrastructure company with 1 Million screens deployed worldwide. Providing infrastructure solutions since 2003, Userful has the expertise and experience to help guide system assessment, design and deployment. The entire Userful team is committed to complete customer satisfaction.
